Application/Control Number: 09/653,717

Art Unit: 1614

Claims 10-38 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 10-3% the nature of the second component is not clear. How can there be two second components?

It is not clear if the "dopaminergic agonists" in claims 10, 15 and 28 are the same or different than the nicotine or nicotine derivative recited in these claims. Janson et al discloses that nicotine is a dopaminergic agonist.

It is not clear that claim 12 that the dopaminergic agonist is required. Amending it to recite that the second component is selected from bromocriptine or biperiden will overcome this rejection.

There is no antecedent basis in claim 12 for the "second component" of claim 13.

No subject or effective amount are recited in claim 15.

Claims 17 and 29 and 38 do not further limit the claims from which they depend, since on page 3 the term "long-term" is defined as a period of more than three months. It is not clear if the intent is that 3 months and 1 day or 4 months.

In claim 15 the word "improving" is relative. Claim 18 does not further limit the claim 17, since it is inherent that D1 and D2 dopaminergic receptors are associated with neurodegenerative disease. Furthermore, it is not clear if the subject must have more than one disease. Amending claim 15 to recite "A method for improving the functionality of D1 and D2

Art Unit: 1614

dopaminergic receptors in a subject having a neurodegenerative disease comprising...." and canceling claim 18 will overcome these rejections.

No effective amount is recited in claim 28.

In claim 32 the recitation "and/or" is confusing. In re Anderegg 51 USPQ 66.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 10-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Janson et al or applicants' admissions.

Domino et al (abstract, among others) and applicants (pages 2-3) disclose that both nicotine and its derivatives and L-Dopa and dopaminergic agonists, alone and in combination, are useful to treat neurodegenerative disease. The instant claims differ over Domino et al and applicants' admissions in reciting specific combinations, forms and amounts of compositions, duration of treatment and routes of administration. However, in the absence of a showing of unobvious results in Declaration form commensurate in scope with the claims, no unobvious is seen in combining two compounds, each of which is know to be useful to treat the same condition and some of which are taught to be useful together, to form a composition or use in a method to treat the condition for which their use is taught in the art. Furthermore, once said

Art Unit: 1614

method and composition are known specific combinations, forms and amounts of compositions, duration of treatment and routes of administration are within the skill of the artisan.

Page 4

The Examples have been considered but are not persuasive. Example 1 and Table I does not show synergistic results, decrease in the dose of L-Dopa or control of clinical symptoms.

Table II does not discuss control of clinical symptoms. In Tables III and IV it is not clear that the patient continues to receive the claimed second component. They do not show a decrease in the dose of L-Dopa.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Cook whose telephone number is (703) 308-4724. The examiner can normally be reached on Monday through Thursday from 6:30 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marianne Seidel, can be reached on (703) 308-4725. The fax phone number for the organization where this application or proceeding is assigned is (703) 308-4556.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1235.
